

COMPACT [SMOKING] OVEN

ABSTRACT

Sub D6

A compact [smoking] oven comprises a [box-shaped] housing having a peripheral wall composed of two wall portions spaced from one another and including an inner wall portion provided with a plurality of thoroughgoing openings; having at least one heating element for heating food products; a rotatable food product supporting means; and tray means located below rotatable food product supporting means so as to collect fat. For using oven as smoking embodiment, under tray means is placed a container for accommodating wooden chips [and] having at least one wall provided with a plurality of openings, a heating unit for the container so that when the container is heated and wooden chips inside the container are heated a smoke is produced which exits the container through the openings in the container, then enters a space inside the peripheral wall and exits the space through the opening of the inner wall portion into an interior of the housing, and [means for holder for] a food product to be smoked by the smoke.
